經驗分享：使用Pods框架及WPUF管理自定義文章類型

Experience Sharing: Manage Custom Post Types Using Pods Framework and WPUF

Victor K. Nip

Hong Kong WordPress Meetup

2023-04-17

經驗分享 / Experience Sharing

在這次聚會中，Victor 將分享他使用 Pods Framework 和 WP User Frontend 在 WordPress 中管理自定義文章類型 (Custom Post Type - CPT) 的經驗。 在 WordPress 中，許多 "物件"（例如 WooCommerce 產品、輸入表單）都是以創建它們的插件定義的 CPT 的文章存儲在數據庫中。 作為開發人員，您也可以創建自己的 CPT，例如職位空缺、地產廣告、藝術品資料、員工履歷等，以滿足項目的需要。 這次分享主題將包括如何擴展標準文章和頁面的功能、如何創建 CPT、如何在存檔頁面中顯示 CPT 文章列表、如何使用 Pod 模板（即無需編寫 PHP）顯示 CPT 文章的內容 。

In this meetup, Victor will share his experience in managing custom post types (CPTs) in WordPress using Pods Framework and WP User Frontend. In WordPress, many "things" (such as WooCommerce products, input forms) are stored in the database as a post of certain CPTs as defined by the plugins that create them. As a developer, you can also create your own CPTs, such as job ad, property listing, artwork information, employee record, etc., to suit the needs of your project. The topics in this meetup will include how to extend the features of standard posts and pages, how to create a CPT, how to show a listing of posts of a CPT in an archive page, how to show the contents of a post of a CPT using Pod Templates (i.e., without coding in PHP).

Agenda

- What is custom post type?
- Why use Pods Framework?
- Demo: Extending existing post type
- Why use WP User Frontend?
- Demo: Using custom post type
- Q&A

Custom Post Type

- WordPress comes with some default post types:
  - Post, Page, Attachment, Revision, Nav Menu
- Any post types you create, or created by a plugin, is a custom post type (CPT)
- Examples:
  - Movie on a movie website
  - Job ad on a job board
  - Property ad on a property agent's website
  - Artwork and artist on an art gallery website
- WordPress itself does not have a CPT management function
- Showing the custom contents of a CPT post on a webpage needs a custom template by default which requires HTML and PHP knowledge

Demo: Extending Existing Post Type

Display a YouTube video before the main texts of a post

Why Extend Existing Post Type?

- Add fields to an existing post type (including default post types and other custom post types created by plugins)
  - E.g., add a YouTube video field to Product (by WooCommerce) to demonstrate the usage of every single product
- Custom listing of existing post types
  - E.g., products list of WooCommerce Products

Add New Pod

You do not have any Pods set up yet. You can set up your very first Pod below.

1 Create or Extend   **2** Configure

Pods are content types that you can customize and define fields for based on your needs. You can choose to create a Custom Post Type, Custom Taxonomy, or Custom Settings Pages for site-specific data. You can also extend existing content types like WP Objects such as Post Types, Taxonomies, Users, or Comments.

Not sure what content type you should use? Check out our Content Type Comparison to help you decide.

One-Click Quick Actions

- Add custom fields to Posts

- Add custom fields to Pages

- Add custom fields to Categories

- Add custom fields to Users

Add New Pod Wizard

Create New »

Create entirely new content types using **Post Types**, **Taxonomies**, or **Custom Settings Pages**.

Extend Existing »

Extend any existing content type within WordPress, including **Post Types** (Posts, Pages, etc), **Taxonomies** (Categories, Tags, etc), **Media**, **Users**, or **Comments**.

Browse: Home / Theme Handbook / Template Files Section / Custom Post Type Template Files

Custom Post Type Template Files

The WordPress theme system supports custom templates for custom post types. Custom templates for the single display of posts belonging to custom post types have been supported since WordPress Version 3.0 and the support for custom templates for archive displays was added in Version 3.1.

🔗 Custom Post Type – Template Hierarchy

WordPress will work through the template hierarchy and use the template file it comes across first. So if you want to create a custom template for your `acme_product` custom post type, a good place to start is by copying the `single.php` file, saving it as `single-acme_product.php` and editing that.

However if you don't want to create custom template files, WordPress will use the files already present in your theme, which would be `archive.php` and `single.php` and `index.php` files.

Single posts and their archives can be displayed using the `single.php` and `archive.php` template files respectively,

- single posts of a custom post type will use **single-{post_type}.php**
- and their archives will use **archive-{post_type}.php**
- and if you don't have this post type archive page you can pass **BLOG_URL?post_type={post_type}**

where {post_type} is the `$post_type` argument of the `register_post_type()` function.

Most-Viewed YouTube Video

"Baby Shark Dance", published June 17, 2016, is the most-viewed YouTube video with over 12 billion views.

Your All-in-one Frontend Companion!

WP User Frontend is packed with features that completes all of your Frontend needs.

Frontend Posting

Create forms, allow users to post anything from frontend. Insert forms into pages using shortcodes.

Registration & Profile Builder

Create registration forms and profiles easily with templates and assorted fields to customize forms.

Form Templates

A quick way of creating pre-defined forms with a single click. Drag & drop customization is available as well.

Subscriptions

Earn from subscription based posting on your site and pay people with built-in gateways.

Content Restrictions

You can restrict content for your premium users only with just a shortcode.

Frontend Dashboard

With just a simple shortcode, give your registered users an individual dashboard of their own.

COUPONS

Demo: Using Custom Post Type for Event Registration

The Case

Imagine you have to fill in a registration form to register yourself before you can come to this meetup. The organizer, Ivan, would require you to fill in a simple form with your name, phone, and email address, and he wants a photo of each registrant, too. He also wants to have an archive to list the registrants showing the photo and name of each registrant, and when the registrant is selected then all the filled information of the registrant will be shown on a single page. Finally, he wants to assign specific registered participants to certain positions and have a speaker page for publicity.

Steps
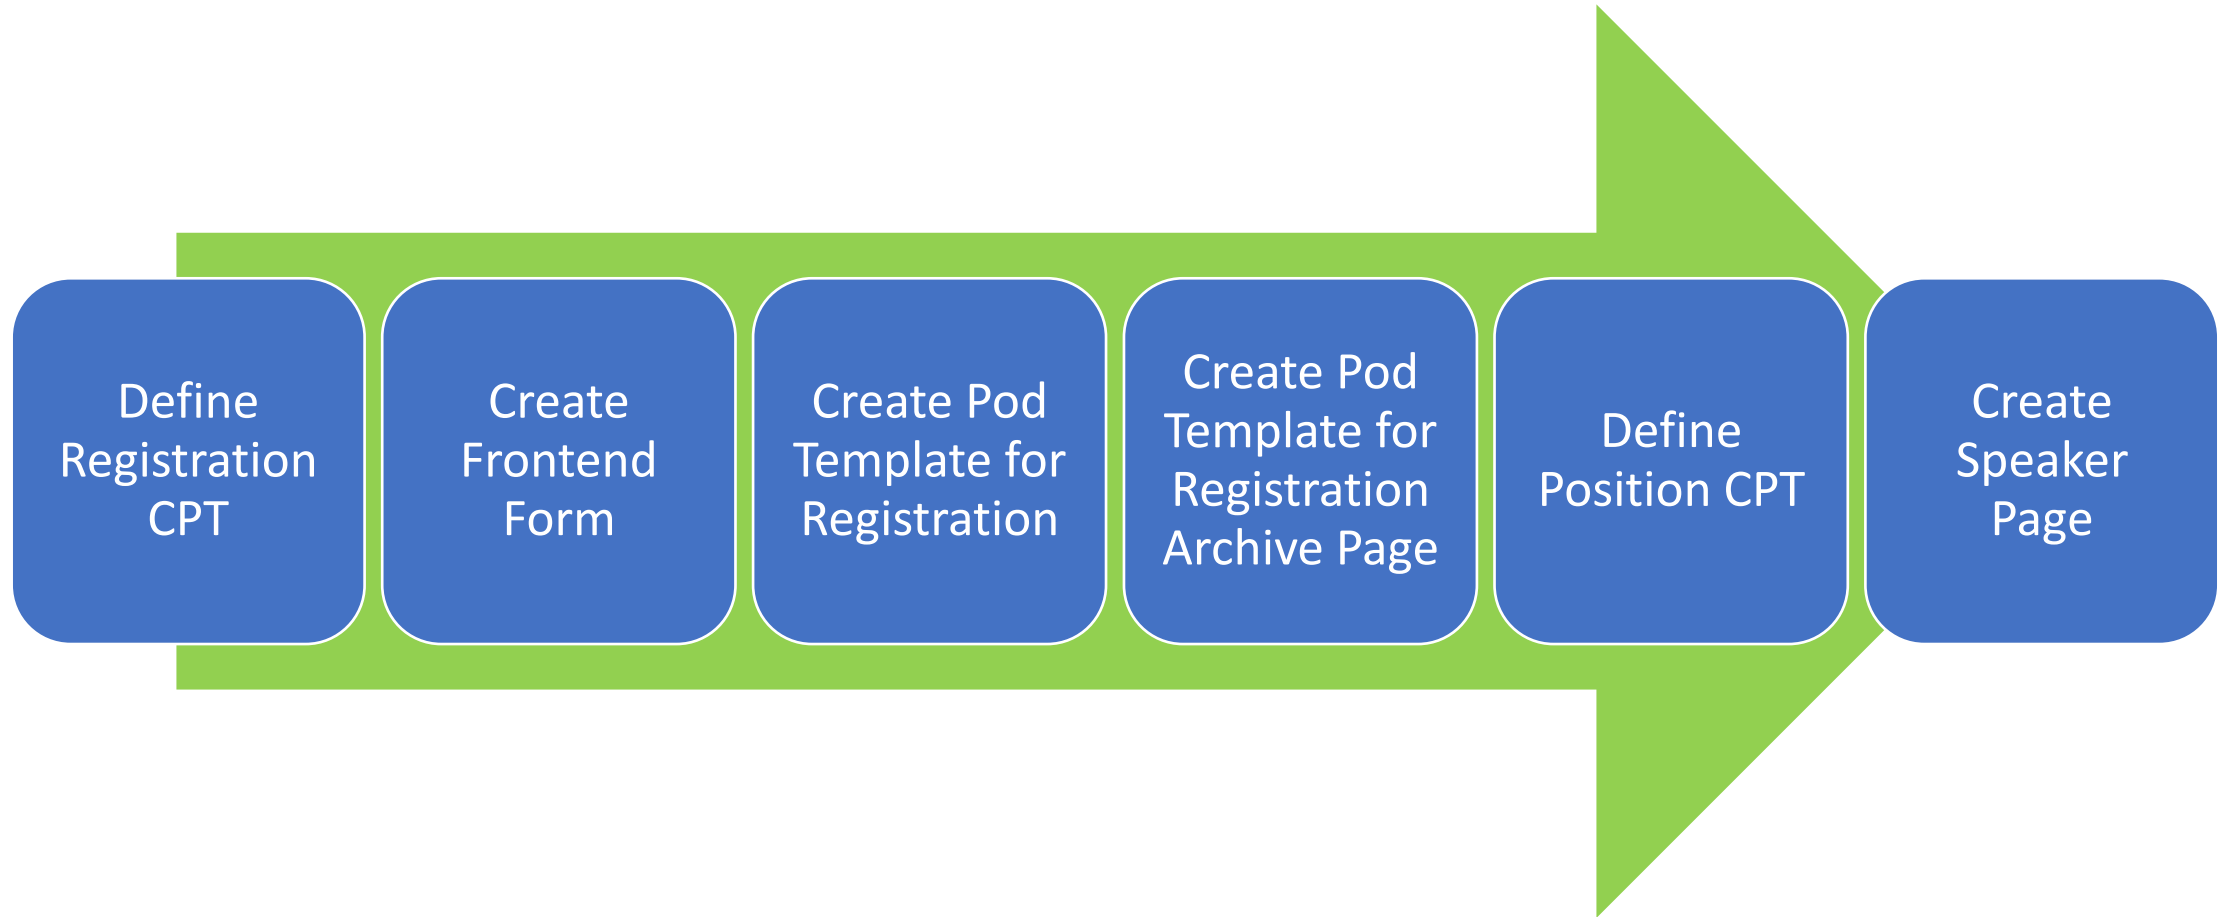

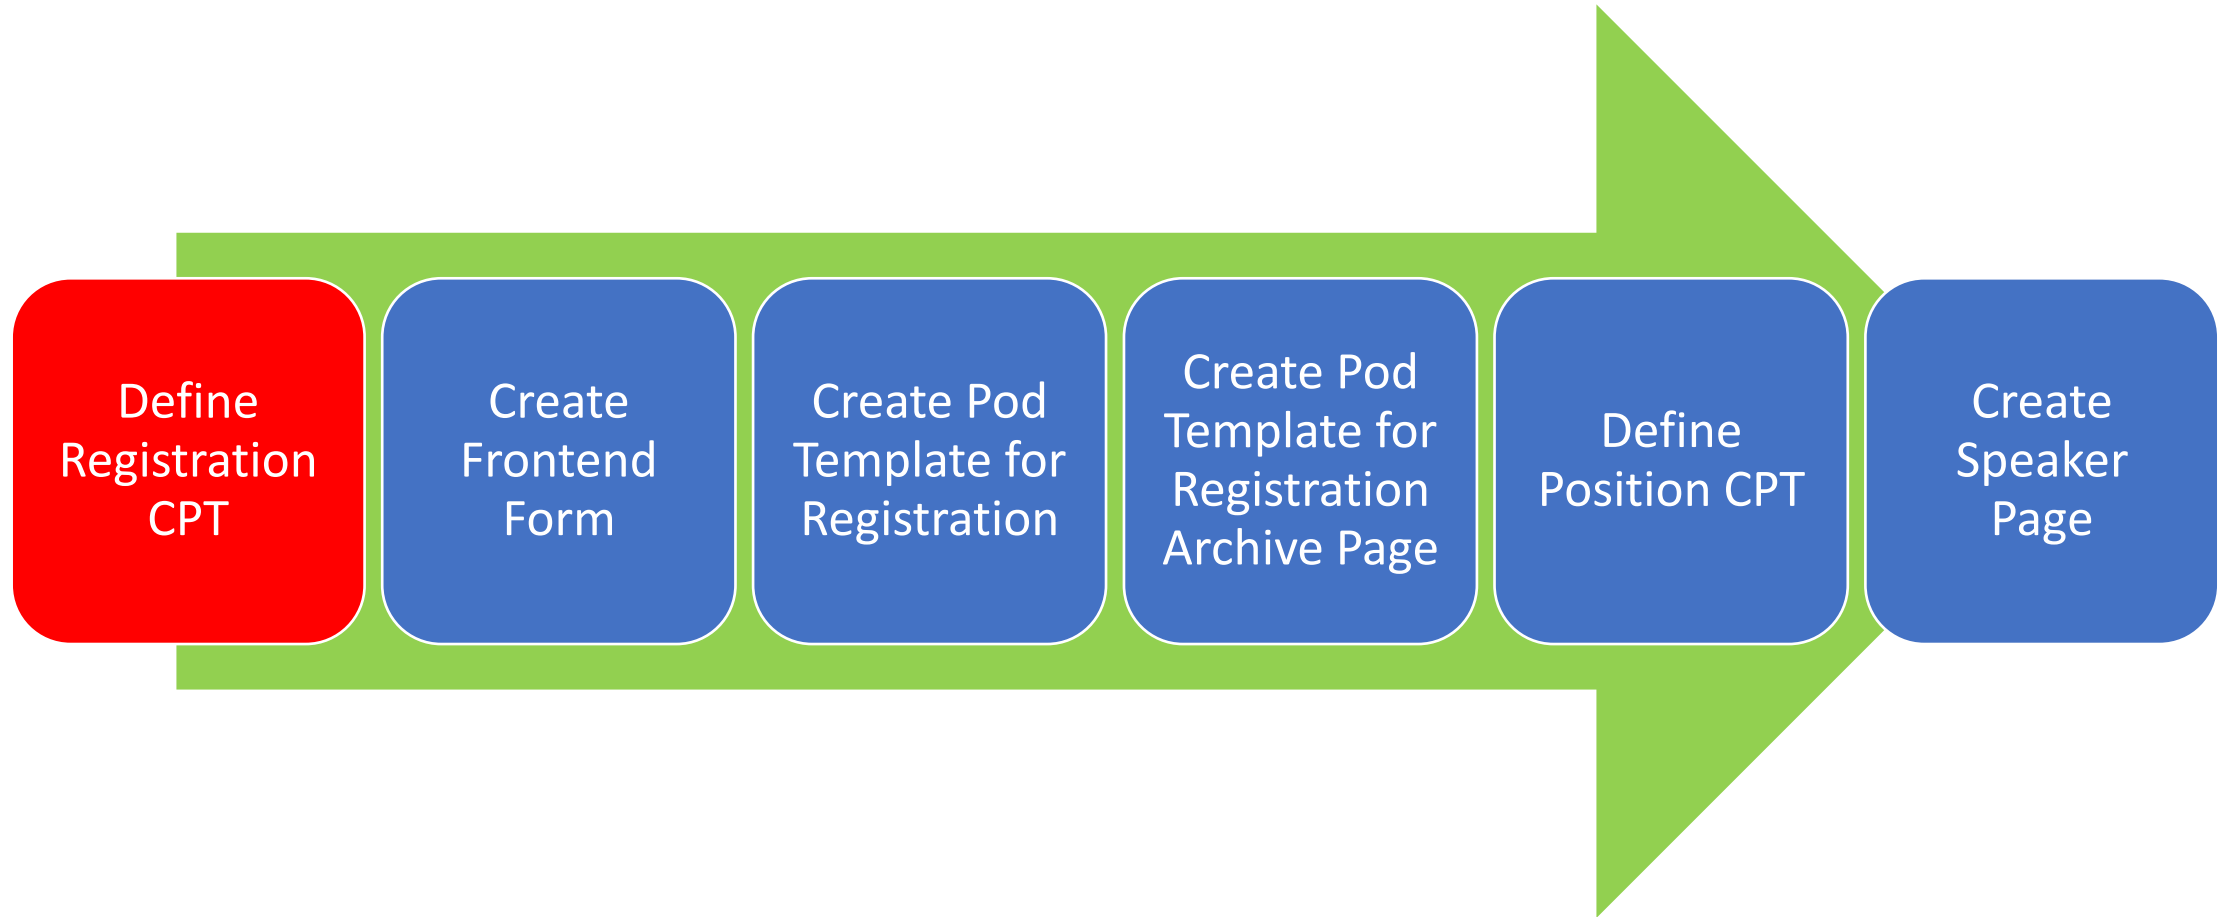

Define Registration CPT → Create Frontend Form → Create Pod Template for Registration → Create Pod Template for Registration Archive Page → Define Position CPT → Create Speaker Page

Steps

Define Registration CPT → Create Frontend Form → Create Pod Template for Registration → Create Pod Template for Registration Archive Page → Define Position CPT → Create Speaker Page

Friends of Pods

We need **YOU**

🎉 Pods 2.9 is out and we are building the next feature for Pods 3.0: Conditional Logic for Fields

🤝 Your support makes a direct impact on how quickly our team can finish this important work. Pods is fully funded by donations and powered by our community contributors. Help us continue our work and get Pods 3.0 completed.

☑ Donors get to vote on the next feature we work on, they decide what we do next.

Pods 3.0 Funding Progress

84%

Learn More   DONATE NOW »

🧙 You can also check out the new add-ons available from Pods Pro by SKCDEV which has partnered with Friends of Pods to help bring in more donations.

Add New Pod [« Back to Manage]

1 Create or Extend   **2** Configure

Pods are content types that you can customize and define fields for based on your needs. You can choose to create a Custom Post Type, Custom Taxonomy, or Custom Settings Pages for site-specific data. You can also extend existing content types like WP Objects such as Post Types, Taxonomies, Users, or Comments.

Not sure what content type you should use? Check out our Content Type Comparison to help you decide.

One-Click Quick Actions

- Add custom fields to Pages
- Add custom fields to Categories
- Add custom fields to Users

Add New Pod Wizard

Create New »

Create entirely new content types using **Post Types**, **Taxonomies**, or **Custom Settings Pages**.

Extend Existing »

Extend any existing content type within WordPress, including **Post Types** (Posts, Pages, etc), **Taxonomies** (Categories, Tags, etc), **Media**, **Users**, or **Comments**.

Why Not Always Define Fields in Pods Framework?

- Pods Framework can handle fields created by other plugins

- Form function, such as what WPUF provides, need to define the field types for a form to function, so there is no need to define the same field multiple times

- Conflicting field definitions of the same field by different plugins will cause errors

Custom Post Type Demo

Default Archive Page

Archives: Registrations

Victor Nip

April 9, 2023
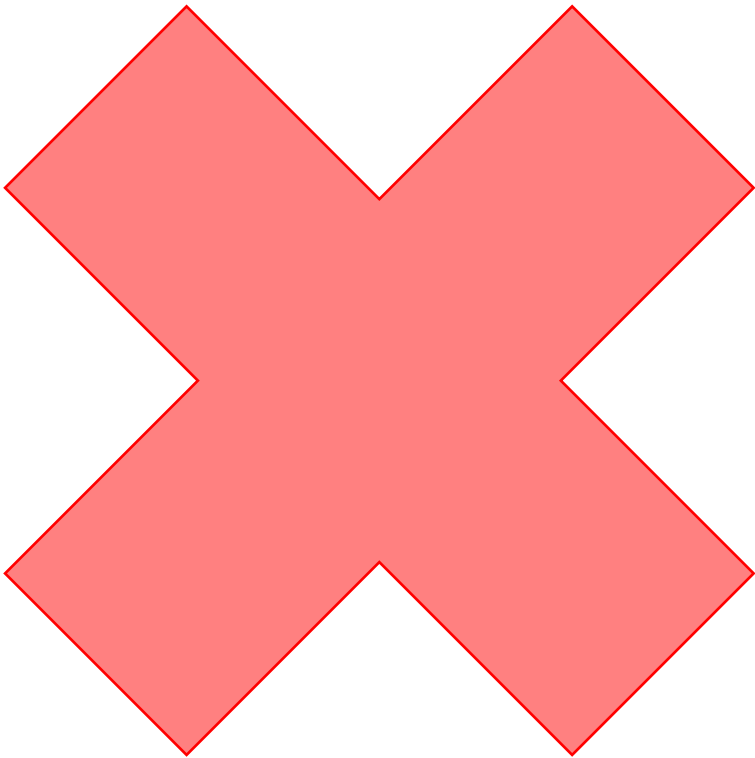

Problems with Default Archive Page

- One option is to replace the excerpt with the contents of the template, which restricts what and how you can show

- The other option is to use a custom hook, which means you have to write PHP codes

- Solution: Use a custom archive page

Special Notes on Using Pods Framework and WPUF Together

- Pods Framework checks the data when data are saved by WPUF. Problems may arise if a field is defined differently in Pods and WPUF.

- Some WPUF field types are not supported by Pods (e.g., Repeat Field Type)

- For certain field types, Pods and WPUF store the data differently (e.g., Multiple Media Files)

Some Advanced Features Not Discussed

- Pod Template
  - PHP codes can be inserted into a template
- Magic Tag
  - Traversal notation: A field of a field which is a post type
    - E.g., the CPT is artwork, the artist name is {@artist.name}
  - Safe output:
    - E.g., make url's safe {@permalink,esc_url}
    - E.g., remove all HTML tags {@post_content,strip_tags}
  - See https://docs.pods.io/displaying-pods/magic-tags/using-magic-tags/, https://docs.pods.io/displaying-pods/magic-tags/
- Pods Shortcodes
  - Parameters and SQL-like codes can be inserted
  - See https://docs.pods.io/displaying-pods/pods-shortcode/
